| B.Sc. Pharmaceutical Chemistry 1st Year | | | |
|---|---|----------|----------|
| Semester-1 st | L | T | C |
| | 3 | 0 | 0 |
| Course Code: BPCH-101 | Course Title: Introduction to Pharmaceutical Sciences | | |
| Max Marks: 60+40 | Time: 3H | | |

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT- I

Orientation and historical background of pharmacy profession: Pharmacy as a career, Pharmacy Profession: History of Pharmacy in India, Pharmaceutical education in India and abroad. Official books: Introduction to official compendia with emphasis on Indian pharmacopeias, British Pharmacopeias and United State Pharmacopeias

UNIT II

Routes of Drug Administration: Need for dosage forms, therapeutic consideration in dosage form designing. Routes of drug administration and dosage forms for oral, rectal, parenteral, subcutaneous, ocular, optic and nasal route. Introduction to different dosage forms, their classification with examples:

UNIT- III

Definitions of solid dosages form like powders and granules, dentifrices, capsules and tablets, liquid orals like solutions, aromatic waters, syrups, spirits, elixirs, glycerine, lotions, liniments, gargles,

mouth washes, douches, draught preparation, sterile products like injectables, implants, ophthalmic formulations and semi solid products, solutions for external use- suppositories.

UNIT- IV

Important terminologies in Pharmacy: Definitions and examples. Introduction to Quality Control: Significance of quantitative analysis in quality control, Different techniques of analysis.

Suggested Books

| Semester-1 st | L | T | C |
| | 3 | 0 | 0 |
| Course Code: BPCH-102 | Course Title: Pharmaceutical Chemistry-I | | |
| Max Marks: 60+40 | Time: 3H | | |

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT-1

Acid-base concept and Buffers: Arrhenius concept, Bronsted Lowry concept and Lewis concept. Buffer action, buffer capacity and pharmaceutical applications of buffers. Gastrointestinal agents: Acidifying agents, antacids, cathartics, emetics and antimicrobial agents. Major Intra and extra cellular electrolytes: Major physiological ions, electrolytes used in replacement therapy, physiological acids-base balance, electrolytes used in acid-base therapy, electrolyte combination therapy.

UNIT-II

Essential and trace ions: Copper, zinc, chromium, manganese, molybdenum, selenium, sulphur and iodine. Miscellaneous inorganic pharmaceutical agents: Inhalants; respiratory stimulants, expectorants, poison and antidote and pharmaceutical aids. Aromatic Compounds: Structure and resonance of benzene, aromatic character, mechanism of electrophilic aromatic substitution, orientation effects in electrophilic substitution, nucleophilic aromatic substitution.

UNIT-III

Preparation, properties and actions of: Phenols, carboxylic acids, amines, diazonium salts, aryl halides and ketones. Poly nuclear aromatic hydrocarbons: Naphthalene, phenanthrene and anthracene.

UNIT-IV

Heterocyclic compounds: Study of fundamentals of heterocyclics, nomenclature, methods of synthesis and important chemical reactions of the following: (a) Five-membered heterocycles: Furan, thiophene, pyrrole, thiazole, oxazole, imidazole, pyrazole, triazole and tetrazole; (b) Six-membered heterocycles: Pyridine, pyridazine, pyrimidine, pyrazine. Benz-fused heterocycles: Quinoline, isoquinoline, indole.

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT-I

Thermodynamics: Preliminary and definitions of systems, surrounding, macroscopic properties and state variables, thermodynamic equilibria, extensive and intensive properties, first law of thermodynamics, internal energy and first law, enthalpy of system, heat capacity, correlation between C_p and C_v for an ideal gas. Work done on reversible isothermal expansion of an ideal gas. Adiabatic expansion of an ideal gas, work of expansion, internal energy change and enthalpy change. Comparison of isothermal and adiabatic changes. Limitations of first law and need of second law.

UNIT-II

Cyclic process, Carnot cycle, definition of second law of thermodynamics, spontaneous process. Concept of entropy, entropy change accompanying change of phase, entropy changes in reversible and irreversible processes. Absolute entropy, determination of absolute entropy with the help of third law of thermodynamics. Applications of thermodynamics. Solutions: Solutions of liquids in liquids, ideal and real solutions, colligative properties of dilute solution, lowering of vapor pressure of non-volatile solute, osmosis and osmotic pressure in terms of chemical potential, Vant-Hoff equation for osmotic pressure of dilute solutions, elevation of boiling point and depression in freezing point by a non-volatile solute, determination of molar mass from vapor pressure lowering, osmotic pressure, boiling point elevation and freezing point depression, Solute distributing in immiscible solvent, distribution coefficient, conditions for validity of distribution law and the thermodynamic derivation, biological applications.

UNIT-III

Electrochemistry: Electrode potential, Nernst equation, standard potential, standard hydrogen electrode, reference electrodes, indicator electrodes. Potentiometry: Theoretical consideration, ion-selective electrodes, measurement of potential, location of the end point, equipment, analytical applications, differential curves, determination of K_{sp} , pH measurements, dead-stop titrations; pH meter, pH definition, equipment, applications. Kinetics: Reaction Rate: Rate and rate constant, order

and molecularity, zero, first and second order reactions, half life time, integration of rate expressions, methods of determining order of a reaction, effect of temperature on reaction rates, Arrhenius equation. Concept of steady state approximation, activation energy, energy barrier. Collision and activated complex theory of bimolecular reactions.

UNIT-IV

Catalysis: Characteristics of catalyzed reactions; definition of the terms, autocatalysis, negative catalysis, inhibitors, promoters, homogeneous and heterogeneous catalysis, acid base catalysis and its mechanism, enzyme catalysis, Michaelis Menten equation, turn over number, the Line Weaver-Burk method. Photochemistry: Introduction, consequences of light absorption, the Jablonski diagram, Lambert Beer law, Grothus Draper law, the Stark-Einstein law of Photochemical equivalence, Quantum efficiency of quantum yield, Photochemical reaction.

| | 3 | 0 | 0 |
| Course Code: BPCH-104 | Course Title: Industrial Safety and Environment Sciences | | |
| Max Marks: 60+40 | Time: 3H | | |

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT-I

Personal Basics and Chemical Safety: PPE, Compatibility Matrices, MSDS, Waste Management, Storage Concerns, Safety measures in handling and storage of chemicals, Fire chemistry and its control, Safety color codes of chemicals. Hazard Classification: Hazard Classification chemical, physical, mechanical, ergonomics, biological and noise hazards, Hazards from utilities like air, water, steam.

UNIT-II

Process Safety: Process Regulation Via Controls, Runaway Reactions, Vents and Valves, Licencing, Plant Design/Layout, Energetic Concerns (Explosions), Spill Clean-Up, Accident Analysis, Utilities Management, Safety in plant design and layout, Safety provisions in the factory act 1948, Indian explosive act 1884, ESI act 1948. Risk Management: Overall risk analysis, Methods for determining consequences effects: Effect of fire, Effect of explosion and toxic effect, Emergency Planning, First aids.

UNIT-III

Environmental Pollution: Definition; Causes, effects and control measures of air, water, soil, marine, noise, thermal, and nuclear pollution; Solid waste management, Role of an individual in prevention of pollution, Disaster management. Social Issues and the Environment: From unsustainable to sustainable development, Urban problems and related to energy, Water conservation, Rain water harvesting, Watershed management, Resettlement and rehabilitation of people, Environmental ethics, Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, Wasteland reclamation, Consumerism and waste products, Acts (EPA, Water, Air, Wildlife and Forest conservation)

UNIT-IV

Environmental legislation. Human Population and the Environment: Population growth and explosion, Environment and human health, Human Rights, Value Education, HIV / AIDS, Family, Women and Child Welfare, Role of Information Technology in Environment and Human Health.

Suggested Books

- Blake RP. Industrial Safety. Prentice Hall.
- Lees FP. Loss Prevention in Process Industries: Hazard Identification, Assessment and Control. Butterworth Heinemann.

- Bharucha E. Textbook of Environmental Studies for Undergraduate Courses. Universities Press.

Semester II

| B.Sc Pharmaceutical Chemistry 1st Year | | | |
|--|----------|---|----------|
| Semester-II | L | T | C |
| | 4 | 0 | 4 |
| Course Code: BPCH-201 | | Course Title: Physical Pharmaceutics-I | |
| Max Marks: 60+40 | | Time: 3H | |

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each. Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks

UNIT – I

Ideal Gases: Behaviour of ideal gases, Application of ideal gas law, Vapor pressure, Effect of temperature on vapor pressure, Properties of Miscible and Immiscible Liquids, Solutions.

Matter and Properties of Matter: State of matter, change in the state of matter, latent heats and vapour pressure, sublimation-critical point, Eutectic mixtures, gases, aerosols - inhalers, relative humidity, liquid complexes, liquid crystals, glassy state, solids crystalline, amorphous and polymorphism.

UNIT –II

Micromeritics and Powder Rheology: Particle size and distribution, average particle size, number and weight distribution, particle number, methods for determining particle volume, optical microscopy, sieving, sedimentation, measurement, particle shape, specific surface, methods of determining surface area, permeability, adsorption, derived properties of powders, porosity, packing arrangement, densities, bulkiness & flow properties.

UNIT – III

Viscosity and Rheology: Newtonian systems, laws of flow, cinematic viscosity, effect of temperature on flow and viscosity. Determination of viscosity, capillary, falling ball, and rotational viscometers. Non-Newtonian systems, pseudoplastic and plastic systems. Thixotropy in formulations. Rheological properties of emulsions, and theory of emulsification.

UNIT – IV

Kinetics and Drug Stability: General considerations & concepts, half-life determination, Influence of temperature, light, solvent, catalytic species and other factors, Accelerated stability study, expiration dating. Buffers: Buffer equations and buffer capacity in general, buffers in the pharmaceutical systems, preparation, stability, buffered isotonic solutions, measurements of tonicity, calculations and methods of adjusting isotonicity.

| Course Code: BPCH-251 P | | Course Title: Physical Pharmaceutics-I Lab | | |
| Max Marks: 30+20 | | Time: 3H | | |

Determination of particle size, particle size distribution and surface area using various methods of Particle size analysis.

Determination of derived properties of powders like densities, porosities, compressibility, angle of repose.

Study of rheological properties of various types of systems using different Viscometers.

Preparation of various types of suspensions and determination of their sedimentation parameters.

Preparation and stability studies of emulsions.

Studies on different types of complexes and determination of their stability constants.

Accelerated stability testing, shelf-life determination and expiration dating of pharmaceuticals.

Preparation of pharmaceutical buffers and determination of buffer capacity. Experiments involving tonicity adjustments.

| Semester-II | L | T | C |
| | 4 | 0 | 4 |
| Course Code: BPCH-202 | | Course Title: Chemistry of Natural Products | |
| Max Marks: 60+40 | | Time: 3H | |

THEORY

UNIT – I

Chemical and spectral approaches to characterize molecules of natural origin. Concept of stereoisomerism taking examples of natural products.

UNIT – II

Chemistry and pharmacological activity of following medicinally important terpenoids: Monoterpenes, sesquiterpenes, diterpenes and triterpenoids. Carotenoids: a- carotenoids, b- carotenes, vitamin A.

UNIT – III

Glycosides: Chemistry, pharmacological activity of digitoxin, digoxin, hecogenin, sennosides, diosgenin and sarasapogenin. Alkaloids: Chemistry, and pharmacological activity of atropine and related compounds; quinine, reserpine, morphine, papaverine, ephedrine, ergot and vinca alkaloids.

UNIT – IV

Chemistry and pharmacological activity of medicinally important lignans and quassinoids, flavonoids and xanthophylls. Chemistry and therapeutic activity of penicillin, streptomycin and tetracycline.

| | 4 | 0 | 4 |
| Course Code: BPCH-203 | Course Title: Pharmaceutical Microbiology | | |
| Max Marks: 60+40 | Time: 3H | | |

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each. Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks

UNIT-I

Introduction: Biochemical organization of the cell and transport process across cell membrane. Historical development and scope of pharmaceutical microbiology, Structure of Bacterial Cell. Identification of microbes: Stains and types of staining techniques, electron microscopy. Nutrition, cultivation and Isolation: Bacteria, Actinomycetes, Fungi and Virus.

UNIT-II

Microbial genetics and variation: Structure of gene, genetic code, transcription, translation, mutation and regulation of gene expression, bacterial enzymes. Genetic Code and Protein Synthesis: Genetic code, Components of protein synthesis, and Inhibition of protein synthesis. Brief account of genetic engineering and polymerase chain reactions. Regulation of gene expression.

UNIT-III

Control of Microbes: Physical and chemical methods: (a) Disinfectants: Dynamics of disinfection, factors affecting the process of disinfection, Evaluation of liquid disinfectants & methods of measuring growth inhibition (MIC). Types of chemical agents employed for disinfection, antisepsis and preservation with their full description & use. (b) Principles and

Practice of sterilization methods: Introduction, sensitivity of microorganisms, typical survival curves for bacterial spores exposed to moist heat or gamma radiations, expression of resistance in terms of D value and Z value & sterility assurance.

UNIT-IV

Sterilization methods (Heat, Gaseous, Radiations & Filtration using different filter devices) with emphasis on sterilization of items used in hospital, thermolabile drugs and injectables. Monitoring of sterilization processes.

Laminar aseptic hoods and aseptic processing. Sterility Testing: Methods and media used with emphasis of the specific details of the sterility testing of parenterals and ophthalmics and other non injectable preparations such as catgut etc. Immunity: Primary and secondary, defensive mechanisms of body, microbial resistance, interferon.

| Course Code: BPCH-204 | | Course Title: Pharmaceutical Analysis-I | |
| Max Marks: 60+40 | | Time: 3H | |

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each. Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks

UNIT-I

Acid Base Titrations: Acid base concept, role of the solvent, Relative strengths of acids and bases; Law of mass action; common-ion effect, ionic product of water, pH, Hydrolysis of salts, Handerson – Hesselbach equation; Buffer and buffer capacity: Acid base indicators, Theory of indicators, Choice of indicators; Neutralization curves (Strong acid and strong base, strong acid weak base, weak acid strong base and weak acid weak base) Polyprotic system, dissociation calculations for polyprotic acids, fractions and equilibrium concentrations of dissociating species at a given pH, salts of polyprotic acids, (Amphoteric salts and unprotonated salts), Buffer calculations for polyprotic acids, titrations of polyprotic acid, amino acid system and its titrations. Application in assay of H_3BO_3 , HCl , H_3PO_4 , NaOH and $\text{Na}_2\text{B}_4\text{O}_7$.

UNIT-II

Oxidation-Reduction Titrations: Concepts of oxidation and reduction, redox reactions, equivalent weights of oxidizing and reducing agents, electrochemical cells, reduction potential, standard reduction potential, Nernst equation, cell representations, measurement of electrode potential and its application in determining the equilibrium constant of a reaction, concept of formal potential, oxidation reduction curves, redox indicators, potassium permanganate titrations, iodometry and iodimetry, ceric sulphate titrations, potassium iodate titrations, sodium 2, 6- dichlorophenol - indophenol titrations, pharmaceutical applications.

Precipitation Titrations: Precipitation reactions, solubility product, effects of common ion, acids, temperature and solvent upon the solubility of a precipitate, conditional solubility product, fractional precipitation, argentometric titrations, ammonium or potassium thiocyanate titrations, mercuric nitrate titrations, indicators, Gay-Lussac method, Mohr's method, Volhard's method, Fajan's method, Pharmaceutical applications.

UNIT-III

Gravimetric Analysis: Precipitation techniques, the colloidal state, gravimetric factor, super saturation, co precipitation and its types, Post precipitation, digestion, washing of the precipitate, filtration, filter papers and crucibles, ignition, thermo gravimetric curves of copper sulphate, specific examples like barium as barium sulphate, aluminium as aluminium oxide, calcium as calcium oxalate and magnesium as magnesium pyrophosphate, organic precipitants. Phase Solubility Analysis: Theory, experimental procedures, applications in Pharmaceutical analysis.

UNIT-IV

Chromatography: Various principles of chromatography including adsorption, partition, ion exchange, size exclusion, gel and other methods. Gas chromatography: Introduction; Principles of gas chromatography, basic GLC apparatus, carrier gases; sample introduction, column, column efficiency, solid support, liquid phases, branches of gas chromatography; Detectors, temperature effect; HPLC: Introduction and methods for qualitative and quantitative analysis using HPLC.

| Course Code: BPCH-301 | Course Title: -1 | | |
| Max Marks: 60+40 | Time: 3H | | |

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each. Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

Unit-I

Unit Operations: Introduction, basic laws. Fluid Flow: Types of flow, Reynold's number, Viscosity, Concept of boundary layer, basic equations of fluid flow, valves, flow meters, manometers and measurement of flow and pressure. Material Handling Systems: Liquid handling- Different types of pumps. Gas handling- Various types of fans, blowers and compressors. Efficiency test of Air compressor. Solid handling- Bins, Bunkers, Conveyers, Air transport.

Unit-II

Filtration and Centrifugation: Theory of filtration, filter aids, filter media, industrial filters including filter press, rotary filter, edge filter, etc. Factors affecting filtration, mathematical problems on filtration, optimum cleaning cycle in batch filters. Principles of centrifugation, industrial centrifugal filters, and centrifugal sedimenters. Dehumidification and Humidity Control: Basic concepts and definition, wet bulb and adiabatic saturation temperatures, Psychrometric chart and measurement of humidity, application of humidity measurement in pharmacy, equipments for dehumidification operations, principles of humidity and humidity control.

Unit-III

Refrigeration and Air Conditioning: Principles and applications of refrigeration and air conditioning HVAC system, Type of Air filters, AHU, Ventilation units, dry & wet scrubbers, dust extraction system, Filtration concepts, clean room classification as per ISO14644. Material of Construction: General study of composition, corrosion, resistance, Properties and applications of the materials of construction with special reference to stainless steel and glass. Factors affecting the choice.

Unit-IV

Temperatures and Its Measurements- Concept of Heat, Temperature and its Measurements, Liquid Thermometers and Mercury Thermometers, Bimetallic Thermometers, Platinum Resistance Thermometers, Thermoelectric Thermometers, Pyrometers, Factors for Selection of Thermometers for Particular Use, Temperature Range and Comparison of Various Thermometers. Vacuum Science and Technology- Introduction to Vacuum Technology, Physical Parameters at Low Pressure, Classification of Vacuum Ranges, General Idea of Vacuum Pump and System, Classification of Vacuum Pumps, Exhaust Pumps and their Characteristics, Measurements of Low Pressure.

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each. Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks

Unit-I

Structure and Properties: Organic chemistry, structural theory, chemical bond, quantum mechanics, atomic orbitals, electronic configuration, molecular orbitals, bond lengths, bond angles, bond energy, polarity of bonds, polarity of molecules, dipole moment, structure and physical properties including melting point, boiling point and solubility, acidity and basicity, isomerism.

Unit-II

Aldehydes and Ketones: Nomenclature of aldehydes and ketones (carbonyl compounds), preparation of aldehydes and ketones. Reactions of aldehyde and ketones: Oxidation, reduction, addition of Grignard reagents, Cannizaro reaction.

Alcohol, Ethers and Role of the Solvent: Nomenclature, methods of preparation, physical properties and chemical reactions. Role of Solvent: Secondary bonding, solubility of non-ionic and ionic solutes, protic and aprotic solvents, ion pairs, role of solvent in substitution reactions, phase-transfer catalysis.

Alkanes: Nomenclature of straight and branched chain alkanes and alkyl groups, classification of carbon atoms of alkanes, isomerism, sources, methods of preparation, physical properties and chemical reactions. Mechanism of free radical halogenation of alkanes, orientation, reactivity and selectivity, chlorofluorocarbons and ozone layer.

Unit-III

Stereochemistry of Organic Compounds: Stereoisomers, enantiomers, diastereoisomers, optical activity, chiral centre, racemic modification, meso-structures, configuration, reactions involving stereoisomers, stereoselective and stereospecific reactions. Geometric isomers, conformational isomers, configurational isomers, conformational analysis of ethane and n-butane, conformations of cyclohexanes, axial and equatorial bonds, Newman projections, Fischer and Wedge formula. Relative and absolute configuration, sequence rules, D & L, R & S and E & Z system of nomenclature.

Unit-IV

Proteins and Nucleic Acid: Structure of amino acids, amino acids as dipolar ions, isoelectric point, configuration of natural amino acids, preparation and reactions of amino acids, peptides, geometry of peptide linkage, determination of structure of peptides, terminal residue analysis, partial hydrolysis, synthesis of peptides, classification, function and denaturation of proteins, structure of proteins, peptide chain, side chains, electrophoresis, conjugated proteins, coenzymes, secondary structure of proteins.

Book (s) Recommended:

- Morrison RT, Boyd RN. Organic Chemistry. Prentice-Hall of India, Pvt. Limited, New Delhi.
- Solomons G, Fryhle C, Johnson R. Organic Chemistry. Wiley(Singapore).
- Smith MB, March J. March's Advanced Organic Chemistry: Reactions, Mechanisms and Structure. Wiley.

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each. Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

Unit-I

Surface and Interfacial Phenomena: Liquid interface, surface and interfacial tensions, surface free energy, measurement of surface and interfacial tensions, spreading coefficient, adsorption at liquid interfaces, surface active agents, HLB classification, solubilization, detergency, adsorption at solid interfaces, solid- gas and solid liquid interfaces, complex films, electrical properties of interface.

Unit-II

Dispersion Systems: Colloidal Dispersions: Definition, types, properties of colloids, protective colloids, applications of colloids in pharmacy.

Unit-III

Suspensions: Interfacial properties of suspended particles, settling in suspensions, theory of sedimentation, effect of Brownian movement, sedimentation of flocculated particles, sedimentation parameters, wetting of particles, controlled flocculation, flocculation in structured vehicles, rheological considerations.

Unit-IV

Emulsions-types, theories, physical stability. Solubility of drugs: (a) Solubility expressions, mechanisms of solute solvent interactions, ideal solubility parameters, quantitative approach to the factors influencing solubility of drugs, Dissolution & drug release, diffusion principles in biological systems. (b) Solubility of gas in liquids. (c) Solubility of liquids in liquids, (Binary solutions, ideal solutions). (d) Distribution law, its limitations and applications.

Book (s) Recommended:

- Sinko PJ. Martin's Physical pharmacy & Pharmaceutical sciences, B.I. Publications Pvt. Ltd.

| | 4 | 0 | 4 |
| Course Code: BPCH-304 | Course Title: Pharmaceutical Regulatory Affairs | | |
| Max Marks: 60+40 | Time: 3H | | |

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each. Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

Unit-I

An overview of Drugs and Cosmetics Act 1940 and rules there under, The Patents and Designs Act 1970, Trademarks. Drug Regulatory Agencies-Historical perspectives, organization structure activities & responsibilities: India (CDSCO), US (FDA), EU (EMA), Japan (PMDA), UK (MHRA), Australia (TGA) & WHO.

Unit-II

Preparation of documents for New Drug Application (NDA) as per requirements of FDA and EUDRA guidelines. GMP requirements as per CFR 210-211 and ICH Q8, Q9 and Q10. Master Files, Out of specification. Stability studies as per ICH, EUDRA, FDA, and Analytical Methodology.

Unit-III

Patent discussion with emphases on: Patentable subject matter, Non-patentable subject matter, Criteria for getting a patent, Types of patent and its usefulness. Filing procedure for patents, patent co-operation treaty. Trade related aspects of IPR.

Unit-IV

Harmonization of regulatory requirements: Study of ICH common technical documents. Harmonization of Pharmacopoeial standards. Regulatory considerations of Pre-clinical and clinical evaluations with special reference to legislation and guidelines of good clinical practice in US, European community and Japan. Study of Environment Act, Factory Act, Industry Act, Consumer Protection Act, Narcotic Psychotropic Substance Act and Copy Right Act. CFR: Quality Management Systems, GLP, GCP. SUPAC guideline

Book (s) Recommended:

- The Pharmaceutical Regulatory Process, Current edition. – Ira R. Berry, Robert P. Martin
- Medical Product Regulatory Affairs: Pharmaceutical, Diagnostics, Medical Devices – John J. Tobin and Gary Walsh
- FDA Regulatory Affairs: A Guide for Prescription Drugs, Medical Devices and Biologics, Current edition – Douglas J. Pisano and David S. Mantus
- Good Drug Regulatory Practices: A Regulatory Affairs Quality Manual (Good Drug Development Series) – Helene I. Dumitriu.

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT-1.

Gastrointestinal (GIT) system and associated endocrines: those of liver, pancreas and gall-bladder various gastrointestinal secretion and their role in the absorption and digestion of food. Disorder of digestive system.

Respiratory System: Anatomy of respiratory organs, functions of respiration, mechanism and regulation of respiration, respiratory volumes and vital capacity.

UNIT-2.

Central Nervous System: Functions of different parts of brain and spinal cord. Neurohumoral transmission in the central nervous system, reflex action, electroencephalogram, specialized functions of the brain, Cranial nerves and their functions.

Autonomic Nervous System: Physiology and functions of the autonomic nervous system. Mechanism of neurohumoral transmission in the A.N.S.

Urinary System: Various parts, structures and functions of the kidney and urinary tract. Physiology of urine formation and acid-base balance. Diseases of the urinary system.

UNIT-3.

Reproductive System: Male and female reproductive systems and their hormones, physiology of menstruation, coitus and fertilization. Sex differentiation, spermatogenesis & oogenesis. Pregnancy its maintenance and parturition.

Endocrine System: Basic anatomy and physiology of Pituitary, Thyroid, Parathyroid, Adrenals, Pancreas, Testes and Ovary, their hormones and functions.

Sense Organs: Basic anatomy and physiology of the eye (vision), ear (hearing), taste buds, nose (smell) and skin (superficial receptors).

UNIT-4.

Classification of food requirements: Balanced diet, nutritional deficiency disorders, their treatment and prevention, specifications for drinking water.

Communicable diseases: Brief outline, their causative agents, modes of transmission and prevention (Chicken pox, measles, influenza, diphtheria, whooping cough, tuberculosis, poliomyelitis, helminthiasis, malaria, filariasis, rabies, trachoma, tetanus, leprosy, syphilis, gonorrhoea, and AIDS).

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT-1.

Carbohydrate Metabolism: Conversion of polysaccharide to glucose-1-phosphate, Glycolysis and fermentation and their regulation, gluconeogenesis and glycogenolysis, Metabolism of galactose and galactosemia, role of sugar nucleotides in biosynthesis, and Pentose phosphate pathway.

The Citric Acid Cycle: Significance, reactions and energetic of the cycle, Amphibolic role of the cycle, and Glyoxalic acid cycle.

UNIT-2.

Lipids Metabolism: Oxidation of fatty acids, β -oxidation & energetic, β -oxidation, β -oxidation, Biosynthesis of ketone bodies and their utilization, Biosynthesis of saturated and unsaturated fatty acids, Control of lipid metabolism, Essential fatty acids & eicosanoids (prostaglandins, thromboxanes and leukotrienes), phospholipids, and sphingolipids.

Biological Oxidation: Enzymes and co-enzymes involved in oxidation reduction & its control, respiratory chain its role in energy capture and its control, Inhibitors of respiratory chain and oxidative phosphorylation, Mechanism of oxidative phosphorylation.

UNIT-3.

Metabolism of Ammonia and Nitrogen Containing Monomers: Nitrogen balance, Biosynthesis of amino acids, Catabolism of amino acids, Conversion of amino acids to specialized products, Assimilation of ammonia, Urea cycle, metabolic disorders of urea cycle, Metabolism of sulphur containing amino acids, Porphyrin biosynthesis, formation of bile pigments, hyperbilirubinemia, Purine biosynthesis,

Purinenucleotide interconversion, Pyrimidine biosynthesis and Formation of deoxyribonucleotides.

UNIT-4.

Biosynthesis of Nucleic Acids: Brief introduction of genetic organization of the mammalian genome, alteration and rearrangements of genetic material, Biosynthesis of DNA and RNA.

Enzymes: Nomenclature, enzyme kinetics and its mechanism of action, mechanism of inhibition, enzymes and iso-enzymes in clinical diagnosis.

Book(s) Recommended:

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weightage of 15 marks.

UNIT-1.

Liquid Dosages Forms: Introduction, types of additives used in formulations, Vehicles, stabilizers, preservatives, suspending agents, emulsifying agents, solubilizers, colors, flavours and others, manufacturing packaging and evaluation of clear liquids, suspensions and emulsions of official in pharmaceuticals.

UNIT-2.

Semisolid Dosage Forms: Definitions, types, mechanisms of drug penetration, factors influencing penetration, semisolid bases and their selection. General formulation of semisolids, clear gels manufacturing procedure, evaluation and packaging.

Suppositories: Classification, Ideal requirements, bases, manufacturing procedure, packaging and evaluation.

Pharmaceutical Aerosols: Definition, propellants, general formulation, manufacturing and packaging methods, pharmaceutical applications.

Ophthalmic Preparations: Requirements, formulation, methods of preparation, containers, evaluation.

Cosmeticology and Cosmetic Preparations: Fundamentals of cosmetic science.

UNIT-3.

Novel Drug Delivery Systems and Controlled release (CR) delivery systems: Principle, Advantages and Disadvantages, Classification and types of oral drug delivery system, transdermal and parenteral CR drug delivery agents including Mucoadhesive, Gastroretentive, MAB based delivery systems, Nanoparticle and nanotechnology, vesicular systems including liposomes, nanosomes etc.

UNIT-4.

Bioavailability of dosage forms and Bioequivalence: Evaluation methods: In vitro dissolution studies for solid oral dosage forms, Federal perspectives on Immediate Release (IR) and Extended Release (ER) products. Brief Concepts of Biopharmaceutics Classification Scheme (BCS), in-vitro in-vitro correlation and bio-waiver. Important federal considerations for bio-availability and bio-equivalence studies for oral products; Statistical considerations including Crossover ANOVA.

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT-1.

Building and facilities design: Introduction, Principal Area, layout design for sterile & nonsterile facility.

Equipment: Introduction, Design, size, location and Construction of Equipment, Cleaning and Maintenance of Equipment, Automatic, Mechanical and Electronic Equipments.

UNIT-2.

Manufacturing operations and control: Introduction, Sanitation of Manufacturing Premises, Mix-ups and Cross Contamination, Processing of Intermediates and Bulk product, Packaging Operations, I.P.Q.C., Release of Finished Product, Process Deviations, Change-
in of Components, Time Limitation on Production, Drug product Inspection, Expiration Dating, Calculation of Yields, Production Record Review.

UNIT-3.

Pharmaceutical packaging: Status, Scope in pharmaceutical industry, Classification of packaging material, Primary and secondary packaging, Function of packaging. Sampling and quality control of packaging materials. Desirable features and a detailed study of different types of Pharmaceutical Containers and closures (Glass, Plastics and Rubber), including their merits and demerits.

UNIT-4.

Packaging machinery: including strip packaging, form, fill and seal machines, liquid and solid filling machines, capping machines. Product-
Package compatibility: Stability of product, package selection and development criteria. Tamper evident packaging systems: Various types and their mechanism.

Flexible packaging: Types of films, Co-extruded films, foils, coating and laminates, shrink and stretch films. Corrugated and solid fibreboards and boxes: Types of corrugation methods and types of box design and Quality control.

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

Unit I

Physicochemical and stereo chemical aspects of drugs including bioisosterism in relation to biological activity, Types of Drug-Receptor interaction. Rationale methods of drug design (QSAR, Pharmacophore mapping, docking) Lead, Discovery of Lead, lead optimization. Vitamins: Water soluble and fat-soluble vitamins. Introduction, Structure, Stereochemistry, Nomenclature, Synthesis of specified drugs (given in parenthesis), mode of action,

Unit II

StructureActivity Relationships (if any) uses and Physicochemical properties of the following classes of drugs: Adrenergic and anti-adrenergic drugs including biosynthesis, storage, release and metabolism of Catecholamine (Isoprenaline, Adrenaline, Salbutamol, propranolol). Cholinergic and Anticholinesterases including biosynthesis, storage, release and metabolism of acetylcholine (Atropine, Neostigmine bromide, Pyridostigmine Bromide).

Unit III

Antispasmodic and Antiulcer drugs (Propantheline bromide, Dicyclomine hydrochloride). Antiparkinsonism drugs (levodopa and carbidopa). Neuromuscular blocking agents (Succinylcholine chloride, Gallamine triethiodide).

Unit IV

Antihistamines including H₁ receptor antagonist Sodium Cromoglycate and Chlorpheniramine. Prostaglandins and other Eicosanoids: Nomenclature, biosynthesis and biological activity. Analgesic-antipyretics and Non-steroidal Anti-inflammatory agents: (Indomethacin and Diclofenic sodium).

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weightage of 15 marks.

Unit I

Non-aqueous Titrations: Theoretical consideration, scope and limitations, acid base equilibrium in non-aqueous media, titration of weak bases, titration of weak acids, indicators, and pharmaceutical products should be selected for illustration. Miscellaneous Methods of Analysis: Diazotisation titration, Kjeldahl nitrogen determination,

Unit II

Karl-Fischer titration, Oxygen flask combustion. Electrochemistry: The electric cell, electrode potential, half cells, types of half cells, sign convention, Nernst equation, the salt bridge, activity

series,

standard potential, standard hydrogen electrode, measuring the relative voltage of half cells, calculations of standard potential, reference electrodes, indicator electrodes.

Unit III

Theoretical consideration, ion-selective electrodes, measurement of potential, location of the end point, equipment, analytical applications, direct measurement of a metal concentration, differential curves, determination of K_{sp} , pH measurements, dead-stop titrations; pH meter, pH definition, relation of pH to potential, equipment, applications. b. conductometric and High Frequency Titrations and their Applications. Polarography and Its Applications: Theory, mass transport processes, current processes, current potential relationship, polarization, choice of electrodes, effect of oxygen, instrumentation, calculation of concentration, laboratory design and safety. Spectrophotometry: Theory, Principle and Instrumentation of UV-Visible Spectrophotometry, Qualitative and Quantitative determinations using Pharmacopoeial UV based methods for single and multiple component formulations and raw materials.

Unit IV

Principle and Instrumentation of Infrared Spectrophotometry, Qualitative determinations using Pharmacopoeial IR based methods for identification and confirmation of pharmaceutical raw materials. Theory, Principle and Instrumentation of NMR Spectrophotometry, Qualitative determinations using Pharmacopoeial NMR based methods for identification and confirmation of pharmaceutical raw materials. Theory, Principle and Instrumentation of Mass Spectrophotometry, Qualitative and Quantitative determinations using Pharmacopoeial MS based methods for identification and confirmation of pharmaceutical raw materials. LCMS: Instrumentation, working and applications. Extractions Procedures: Separation of drugs from excipients, The Craige method of multiple extraction, continuous counter - current extraction, effect of temperature, pH, inert solute, association, ion-pair formation, the emulsion problems in extractions. HPLC: HPLC-UV and HPLC-MS base.

Book(s) Recommended:

- Ravi Shankar, Textbook of Pharmaceutical Analysis, RX Publisher.
- Kamboj PC. Pharmaceutical Analysis – I, Vallabh Prakashan.
- Kamboj PC. Pharmaceutical Analysis – II, Vallabh Prakashan.
- Kamboj PC. Pharmaceutical Analysis – III, Vallabh Prakashan.
- Kasture AV, Mahadik KR. Pharmaceutical Analysis Vol-I, Nirali Prakashan.
- Kasture AV, Mahadik KR. Pharmaceutical Analysis Vol-II, Nirali Prakashan.

Preparation and standardization of perchloric acid and sodium/potassium/lithium methoxide solutions; Estimations of some Pharmacopoeial products, Preparations and standardization of EDTA solution, some exercises related to Pharmacopoeial assays by complexometric titrations, Miscellaneous Determinations: Exercises involving diazotisation, Kjeldahl, Karl-Fischer, Oxygen flask combustion and gasometry methods. Determination of alcohol content in liquid generics, Experiments involving separation of drugs from

excipients, Chromatographic analysis of some pharmaceutical products, Exercises based on acid base titration in aqueous and non-aqueous media, oxidation reduction, Titrations using potentiometric technique, Determination of acid-base dissociation constants and plotting of titration curves using pH meter, Exercises involving polarimetry, Exercises involving conductometric and polarographic techniques.

| | 3 | 0 | 3 |
| Course Code: BPCH-503 | Course Title: Pharmaceutical Quality Assurance | | |
| Max Marks: 60+40 | Time: 3H | | |

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weightage of 15 marks.

Unit I

Pharmaceutical Validation I: Definition, scope & organization, manufacturing process model, government regulations. Validation Master Plans, URS, DQ, IQ, and OQ & PQ of facilities, Equipment's, analytical instruments, computer systems and PLC. Utilities Validation and Cleaning Validation: Pharmaceutical Water System & pure steam, HVAC system and Compressed air system validation coordination Chemistry 1

Unit II

Pharmaceutical Validation II

Equipment, working area and cleaning area validation. Process Validation: Process validation of manufacturing process of different dosage forms including sampling techniques as per guidelines of USFDA/WHO TRS. Pharmaceutical Quality Audits: Principle of Quality Audit. Quality improvement process, Quality in research and development.

Unit III

Quality Management: Introduction, Quality Assurance, Quality Circ 9000, Developments of ISO 9000 Systems, ISO 9001:2008. Complaints and Recalls: Evaluation of complaints, recall procedure, related records and documents. Quality Control Laboratory – responsibilities and laboratory practices.

Unit IV

Routine control on instruments, reagents, sampling plans, standard test procedures and protocols, control on animal house, data generation and storage, quality control documentation of QC facilities. Finished product release, quality review, and batch release documents.

Recommended Texts:

- Pharmaceutical Quality Assurance, M.A. Potdar, Nirali Prakashan, Pune.
- GMP for Pharmaceuticals, 5th Edition, Sidney H. Willing, Marcel Decker Series
- Total Quality Management by Dale H. Besterfield, Pearson Education, New Delhi.
- Total Quality Management by Dr. D.D. Sharma, Sultan Chand & Bros., New Delhi.
- Quality Assurance of Pharmaceuticals: A Compendium of Guidelines .

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

Unit I

Capsules: Introduction, types, advantages and disadvantages, material and method of preparation hard gelatin capsules, size of capsules, method of capsule filling, soft gelatin, capsule shell and capsule content, importance of base absorption and minimum/gm factors in soft capsules, evaluation, quality control, stability testing and storage of capsule dosage forms. Microencapsulation: Types of microcapsules, importance on microencapsulation in pharmacy, microencapsulation by phase separation, coacervation, multi orifice, spray drying, spray congealing, polymerization complex emulsion, air suspension technique, coating pan and other techniques, evaluation of microcapsules.

Unit II

Tablets: (a) Formulation of different types of tablets, granulation technology or large scale by various techniques, physics of tablets making, different types of tablet compression machinery and the equipment employed, evaluation of tablets. (b) Coating of Tablets: - Types of coating, film forming materials, formulation of coating solution, equipments for coating, coating process evaluation of coated tablets. (c) Stability kinetics and quality assurance.

Unit III

Parenteral Products: (a) Preformulation factors, routes of administration, water for injection, pyrogenicity, non-aqueous vehicles, isotonicity and methods of its adjustment. (b) Formulation details, containers and closures and selection. (c) Prefilling treatment, washing of containers and closures, preparation of solution and suspensions, filling and closing of ampoules, vials, infusion fluids

Unit IV

solution and suspensions, filling and closing of ampoules, vials, infusion fluids, lyophilization & preparation of sterile powders, equipment for large scale manufacture and evaluation of parenteral products. (d) Aseptic Techniques: Source of contamination and methods of prevention, design of aseptic area, laminar flow bench services and maintenance.

THEORY

Marks: 100

Instruction: Section (A) is compulsory contain 15 question carrying weight of 2 marks each. Section (B) will contain 8 questions. Candidate will attempt any 5 questions, carrying weightage of 8 marks each.

Section (C) will contain 4 questions. Candidates will attempt any 2 questions each carrying a weight age of 15 marks.

UNIT-I

Preformulation studies: Study of physical properties of drugs like physical form, particle size, shape, density, wetting, dielectric constant. Solubility, dissolution and organoleptic property and their effect on formulation, stability and bioavailability. Study of chemical properties

of drugs like hydrolysis, oxidation, reduction, racemisation, polymerization etc., and their influence on formulation and stability of products.

UNIT-II

Study of pro-drugs in solving problems related to stability, bioavailability and elegance of formulation. Design, development and process validation methods for pharmaceutical operations involved in the production of pharmaceutical products with special reference to tablets, suspensions. Stabilization and stability testing protocol for various pharmaceutical products.

UNIT-III

Performance evaluation methods: In vitro dissolution studies for solid oral dosage forms, Federal perspectives on Immediate Release (IR) and Extended Release (ER) products. Brief Concepts of Biopharmaceutical Classification Scheme (BCS), Lipinski rule of five, in-vitro-in-vivo correlation and bio-waiver. Important federal considerations for bio-availability and bio-equivalence studies for oral products; Statistical considerations including Crossover ANOVA.

UNIT-IV

Introduction to Quality by Design and Optimization Techniques: Risk Assessment (Matrix, & FMEA), Quality Target Product Profile, Critical Quality Attributes, Critical Material Attributes, & Critical Process Parameters for various dosage forms. Concept of optimization, Optimization parameters, Design of Experiments, Statistical design, and other applications.

| Semester-VI | L | T | C |
| | 4 | 0 | 4 |
| Course Code: BPCH-602 | Course Title: Medicinal Chemistry-II | | |
| Max Marks: 60+40 | Time: 3H | | |

UNIT-I

Introduction, Structure, Stereochemistry, Nomenclature, Synthesis of specified drugs (given in parenthesis), mode of action, Structure Activity Relationships (if any) uses and Physicochemical properties of the following classes of drugs: Steroids: Biosynthesis of Cholesterol; Estrogens (Oestradiol), Nonsteroidal estrogens (Stilboesterol), Antiestrogens, Progestogens, (progesterone from stigmaterol), Synthetic Progesterone (norethisterone), antiprogestogens, oral contraceptives, androgens (biosynthesis of testosterone and its synthesis from diosgenin).

UNIT-II

General Anaesthetics: Inhalational anaesthetics, Intravenous anaesthetics. Local Anaesthetics: Esters (Benzocaine), Amides (Lignocaine). Hypnotics and Sedatives: Barbiturates (Phenobarbitone); benzodiazepines (Nitrazepam). Anticonvulsants: Barbiturates; Hydantoin (Phenytoin); Oxazolidinediones (Troxidone); Benzodiazepines and Carbamazepine. Antitussive: Centrally acting Antitussive, Opium alkaloids and related agents and Synthetic Antitussives, Peripherally acting antitussives and Expectorants.

UNIT-III

Central Nervous System Stimulants: Natural and Synthetic (Nikethamide); methylxanthines (Theophyllines) and Modified methylxanthines. Psychopharmacological Agents: Antipsychotic agents: Phenothiazines (chlorpromazine); butyrophenones and miscellaneous; Antidepressants: Tricyclic antidepressants (Amitriptyline), Atypical antidepressants; Monoamine oxidase inhibitors; Anxiolytics: Meprobamate and related drugs (Meprobamate); benzodiazepines (Diazepam). Diuretics: Carbonic anhydrase inhibitors (Acetazolamide); Thiazide and related drugs (Bendrofluazide); High ceiling diuretics (Furosemide), Aldosterone antagonists (spironolactone); other potassium sparing diuretics and osmotic diuretics.

UNIT-IV

Cardiovascular agents: Cardiac glycosides; Antihypertensive agents; Antianginals and vasodilators; Antiarrhythmic drugs; Antihyperlipidemic drugs.

| | 4 | 0 | 4 |
| Course Code: HPCH-603 | Course Title: Pharmaceutical Operation-II | | |
| Max Marks: 60+40 | Time: 3H | | |

Stoichiometry: Unit processes material and energy balances, molecular units, mole fraction, gas laws, mole volume, primary and secondary quantities, equilibrium state, rate process, steady and unsteady states, dimensionless equations, dimensionless formulae, dimensionless groups, different types of graphic representation, mathematical problems.

UNIT-II

Heat

Transfer: Source of heat, heat transfer, steam and electricity as heating media, determination of requirement of amount of steam/electrical energy, steam pressure, Boiler capacity, Mathematical problems on heat transfer, pure steam & boiler act. Evaporation: Basic concept of phase equilibrium, factor affecting evaporation, evaporators, film evaporators, single effect and multiple effect evaporators, Mathematical problems on evaporation.

UNIT-III

Distillation:

Raoult's law, phase diagrams, volatility; simple steam and flash distillations, principles of rectification, Calculation of number of theoretical plates, Azeotropic and extractive distillation. Mathematical problems on distillation.

UNIT-IV

Drying: Moisture content and mechanism of drying, rate of drying and time of drying calculations; classification and types of freeze-drying dryers behaviour of solids during drying, MC, EMC, CMC and LOD dryers used in pharmaceutical industries and special drying methods. Mathematical problems on drying.

Size Reduction and Size Separation: Definition, objectives of size reduction, factors affecting size reduction, laws governing energy and power requirements of mills including ball mill, hammer mill, fluid energy mill etc. Mixing: Theory of mixing, solid-solid, solid-liquid and liquid-liquid mixing equipments.

| | |
|-----------------------|---|
| Course Code: BPCH-604 | Course Title: Pharmaceutical Operation Management |
| Max Marks: 60+40 | Time: 3H |

UNIT-I

Concept of Management: Administrative Management (Planning, Organizing, Staffing, Directing and Controlling), Entrepreneurship development, Operative Management (personnel, Materials, Production, Financial, Marketing, Time/space, margin/Morale), Principles of Management (Co-ordination, Communication, Motivation, Decision Making, leadership, innovation, creativity, delegation of Authority/ Responsibility, Record keeping).

UNIT-II

Operations management: concept, functions; transformation process model: inputs, process and outputs; classification of operations; responsibilities of operations manager, contribution of Henry Ford, Deming, Crosby, Taguchi. Process selection - project, job, batch, mass and process types of production systems.

UNIT-III

Quality Management: Introduction, Meaning, Quality Characteristics of Goods and Services, Juran's Quality Trilogy, Deming's 14 principles, Tools and Techniques for Quality Improvement, Statistical Process Control Chart, Quality Assurance, Total Quality Management (TQM) Model Concept of Six Sigma and its Application. Acceptance Sampling – Meaning, Objectives, Single Sample, Double Sample and Multiple Sample Plans with stated risk, Control charts for variables – Averages and Ranges, Control Charts for Defectives – Fraction Defective and Numbers Defective.

UNIT-IV

Production Management: A brief exposure of the different aspects of Production Management - Visible & Invisible inputs, methodology of activities, performance evaluation techniques, process flow, process know-how, maintenance management. JIT and Lean Production System: JIT Approach, Implementation requirements, Services, Kanban System.

Inventory Management: Concepts, Classification, Objectives, Factors Affecting Inventory Control Policy, Inventory Costs, Basic EOQ Model, Re-order level, ABC analysis. Logistics and Franchising. Purchasing Management – Objectives, Functions, Methods, Procedure, and Value Analysis: Concepts, Stock Control Systems, Virtual Factory Concept and Production Worksheets.

Book(s) Recommended:
